

Improvements: Pressure testing

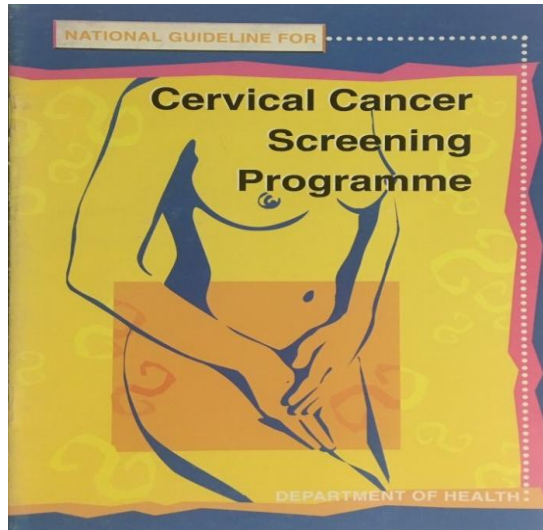

Steps for identifying Improvements

1. Target the critical root causes of our problem.
2. Address critical root causes with narrowly tailored improvements
3. Ensure completeness of our proposal by including key elements.
4. Remove ambiguity from our proposed improvements.
5. Pressure test the improvements to balance burden and public health benefits.
6. Refine and repeat as needed.

“No person may bring any animal on or into any conveyance or facility unless enclosed in a container.”

Example: Cervical cancer screening

- Every women (asymptomatic) will get three free screenings per lifetime
- Starting at age 30; every ten years

GOAL: 70% screening coverage of women 30-59 years by 2010 (i.e., within ten years of the policy)

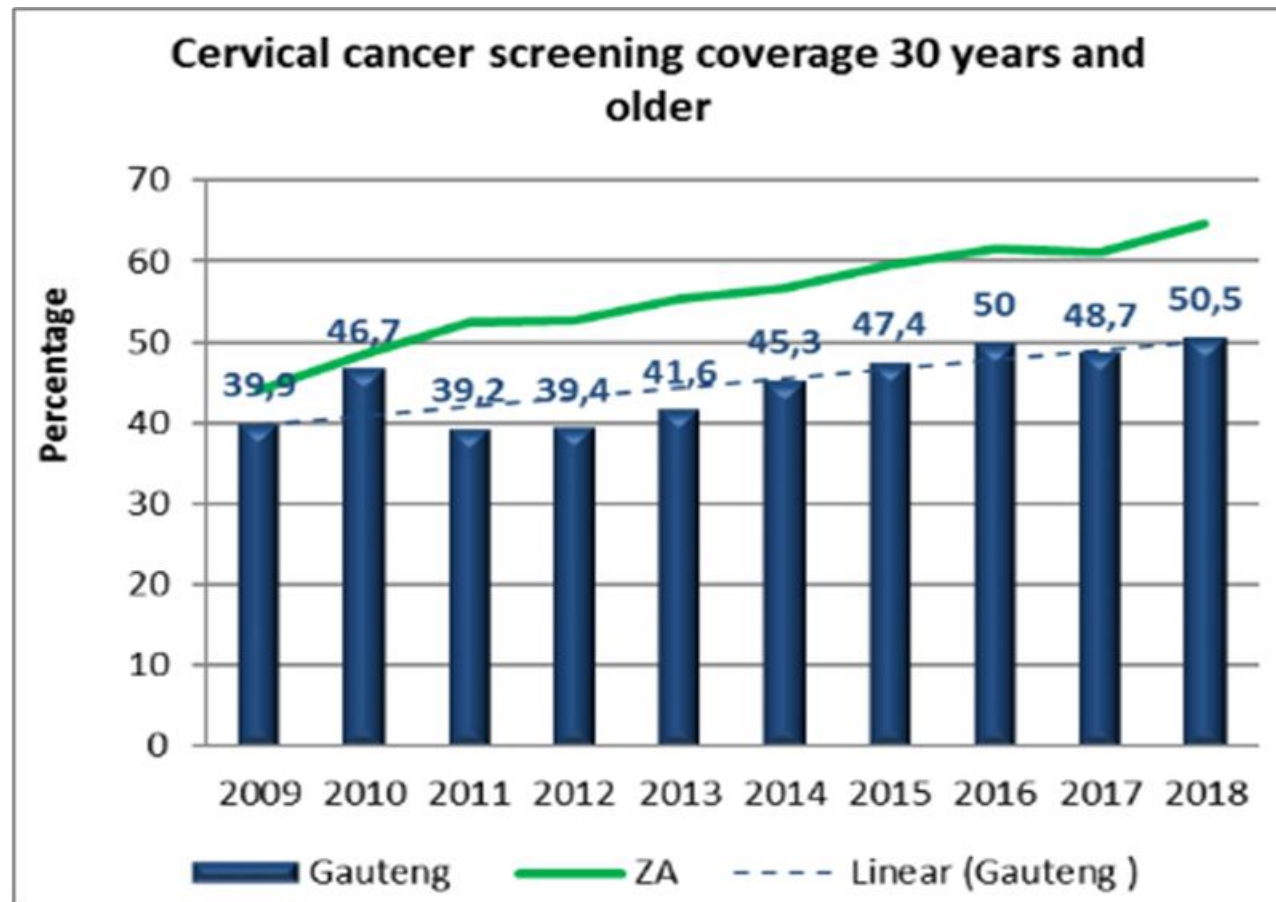

Examples of implementation failure

- **Providers:** unwilling, disagreed with policy, felt that screening deterred them from 'pushing queues'.
 - **Users:** did not accept long wait time, unsupportive provider interactions, perceived link to HIV test, uncomfortable pelvic exam, male providers.
-
- Too few providers started providing screening soon after the policy, with little change several years later.

Ten years in...

- Lots of tests done, lots of money spent, but...
- Only 23% of eligible women screened in 2012.
- Many women unable to benefit from lifesaving intervention.

To avoid this, think about potential weaknesses of a policy upfront.

SA, District Health Barometer (2017/2018)

PREVENT CERVICAL CANCER

The government is introducing
HPV* vaccination for girls in **Grade 4**

Date of **1ST DOSE**

March 2014

Date of **2ND DOSE**

October 2014

Remember to ask your parents/caregiver/guardian to sign
and return the consent form to be vaccinated.

Protecting young girls,

Policy: 2014

**Reduce
incidence of
cervical cancer
by vaccinating
no less than 80%
of girls age 9-14
years with one
dose of HPV
vaccine, through
school-based
delivery.**

- *Target:* Grade 4 girls (age 9 years and older) will be vaccinated.*
- *Schedule:* Each eligible girl will receive 2 doses of HPV vaccine six months apart.*
- *Delivery strategy:* school-based. Two vaccination “campaigns” per year to run for 2 months, six months apart.

**Later amended in 2022 to target grade 5 girls, and moved to a one-dose protocol in 2025.*

Disabled

People with permanent, temporary or situational disabilities

“But what will happen to students who are sick and therefore absent from school on vaccination day?”

ACCESSIBILITY NEED					
	TOUCH	SEE	HEAR	SPEAK	COGNITION
PERMANENT	One Arm 	Blind 	Deaf 	Nonspeaking 	Learning Disability 
TEMPORARY	Arm Injury 	Cataract 	Ear Infection 	Laryngitis 	Sick 
SITUATIONAL	New Parent 	Distracted Driver 	Bartender 	Quiet Space 	Distracted 

EXERCISE

**Pressure test policy improvements
for potential weaknesses**

Exercise instructions:

- Your team will represent the policy improvement you just reviewed in the previous exercise
- You will be paired with a second group. First briefly explain the policy improvement to them.
 - 2nd group: Ask questions about the policy from each of the four types of perspectives. Try to identify all the weaknesses in the proposal!
 - Both groups: Discuss how weaknesses could be addressed
- Switch places and repeat the exercise

Before moving on,
ask yourself:

If we described our
improvements to a
stakeholder, would they
understand how the
proposed changes
would affect them?
